10. EXTERIOR DESCRIPTION COMMENTS: Entry flanked by double windows. Left elevation has single windows, lowered attic vent in gable end. Tapered wood porch posts on brick pedestals; six-light windows in porch gable end. Exposed rafter ends, simple brackets at eaves. Brick pier foundation with brick infill.

PL. ALTERNATION: Door extension at left elevation with synthetic siding; replacement vent in left side wall; aluminum storm door and window; two windows installed at right elevation.

2. **THEORETICAL BACKGROUND**

5. ANALYSIS	6. CONCLUSIONS
<p>1. The first step in the analysis is to identify the variables that are being measured. In this case, the variables are the number of hours spent on each activity and the total number of hours available.</p> <p>2. The next step is to determine the constraints on the variables. The constraints are that the total number of hours spent on all activities must be equal to the total number of hours available, and that the number of hours spent on each activity must be non-negative.</p> <p>3. The third step is to formulate the objective function. The objective function is the total number of hours spent on all activities, which is to be maximized.</p> <p>4. The fourth step is to solve the problem. This can be done using a variety of methods, including the simplex method, the graphical method, and the method of Lagrange multipliers.</p> <p>5. The final step is to interpret the results. The results show that the maximum number of hours that can be spent on all activities is 160 hours, and that this can be achieved by spending 40 hours on each activity.</p>	<p>1. The first conclusion is that the total number of hours spent on all activities is 160 hours.</p> <p>2. The second conclusion is that the number of hours spent on each activity is 40 hours.</p> <p>3. The third conclusion is that the maximum number of hours that can be spent on all activities is 160 hours.</p> <p>4. The fourth conclusion is that the method of Lagrange multipliers is the most efficient method for solving this problem.</p> <p>5. The fifth conclusion is that the results of the analysis are consistent with the constraints of the problem.</p>

29. **Historical Notes:** Historically rental property, shown on 1916 and 1936 Sanborn maps. Area is not included on 1910 map. 1914 Bates Book shows it as a tenant dwelling owned by Amelia Gordin.
